

### **Muddiest Point Minute Paper**

What is the most confusing or difficult topic this week? Provide an example and describe why it's confusing or difficult.

The most confusing part this week was probably the TRAP and subroutines. What made it difficult to understand was wrapping my head around the process and the implementation of it. For example, on the last two slides of lecture four with the JSR and JSRR instructions. It is more or less the use of registers and setting them up that confuses me. Maybe seeing a couple more examples and uses for it will help clear it up in the future. Other than that I am not worried about too much of the material that has been presented so far.
